Common ECGs in CRM

Colin Cunningham MRCP DPhil CCDS

Consultant Cardiologist

Manchester Heart Centre

CORE SYLLABUS

ANATOMY AND PHYSIOLOGY

Structure, including cardiac chambers, valves and great vessels (with particular reference to sites of vascular access), autonomic nervous system, blood supply, conduction system, cardiac cycle, action potential, normal physiology, cardiac failure.

CLINICAL ASSESSMENT

Basic knowledge will be expected of cardiovascular and respiratory symptoms and signs. ALS guidelines and basic X-ray interpretation.

ARRHYTHMIAS – DIAGNOSIS & ECG INTERPRETATION

ECG interpretation of common morphological abnormalities. Candidates should be aware of the features of common tachyarrhythmias such as atrial fibrillation, atrial flutter, atrial tachycardia, AVNRT, AVRT, ventricular tachycardia and ventricular fibrillation. Ventricular pre-excitation and the importance of accessory pathways should be understood. The common bradyarrhythmias including sinus node disorders and heart blocks should be recognised. Clinical evaluation of syncope and its causes and risk assessment of individuals at risk of sudden cardiac death. Evaluation of patients with atrial fibrillation, including stroke risk.

DEVICES

Although a greater depth of understanding will be expected in the specialist section, a general understanding will be expected of: indications for pacing and ICD implantation including CRT & implantable cardiac recorders, device circuitry, sensing technology, conductors and impedance, lead technology, defibrillator testing, pacemaker codes, lead and device extraction, electromagnetic interference, pacemaker syndrome, basics of timing cycle, parameter characteristics and device programming, radiation safety, device malfunction, patient follow-up, hysteresis, mode switching, rate response, ICD detection and therapy, principles underlying device implantation, end of life issues and device deactivation.

Confessions & Disclaimers

- I am not an electrophysiologist!
- ECGs credited to:

Tachycardia

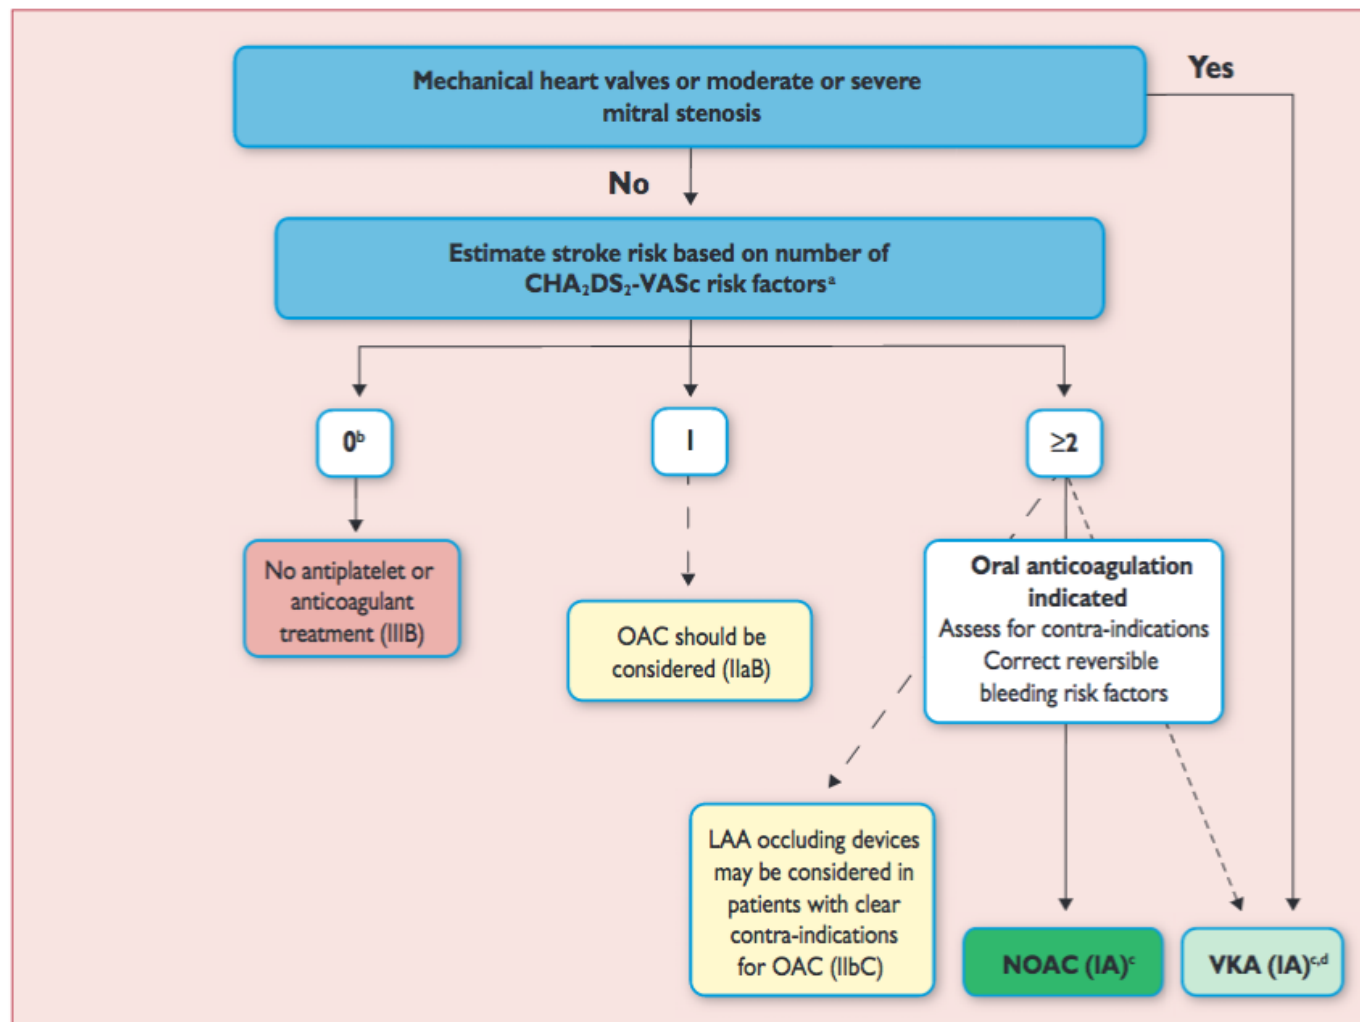

Atrial Fibrillation

Anticoagulation in AF

Risk factors		
C	Congestive Heart Failure	+1 point
H	Hypertension	+1 point
A₂	Age ≥75	+2 point
D	Diabetes	+1 point
S₂	Stroke/TIA History	+2 point
V	Vascular Disease	+1 point
A	Age 65-74	+1 point
S	Sex (Female)	+1 point

AF = atrial fibrillation; LAA = left atrial appendage; NOAC = non-vitamin K antagonist oral anticoagulant; OAC = oral anticoagulation; VKA = vitamin K antagonist.

^aCongestive heart failure, Hypertension, Age ≥ 75 years (2 points), Diabetes, prior Sstroke/TIA/embolus (2 points), Vascular disease, age 65–74 years, female Sex.

^bIncludes women without other stroke risk factors.

^cIIaB for women with only one additional stroke risk factor.

^dIB for patients with mechanical heart valves or mitral stenosis.

Figure 8 Stroke prevention in atrial fibrillation.

(Typical, counter-clockwise) atrial flutter

(Clockwise) atrial flutter

Atrial flutter with 1:1 conduction

Ectopic atrial tachycardia

Atrial tachycardia with 2:1 conduction

Multifocal atrial tachycardia

(Typical, slow-fast) AVNRT

Same patient, after adenosine

AV nodal re-entry

(Atypical, fast-slow) AVNRT

QTc 392

--Axis--

P -40

QRS 77

T 15

- ABNORMAL ECG -

Unconfirmed diagnosis.

Pre-excitation

Normal conduction

Preexcitation

Accessory pathways

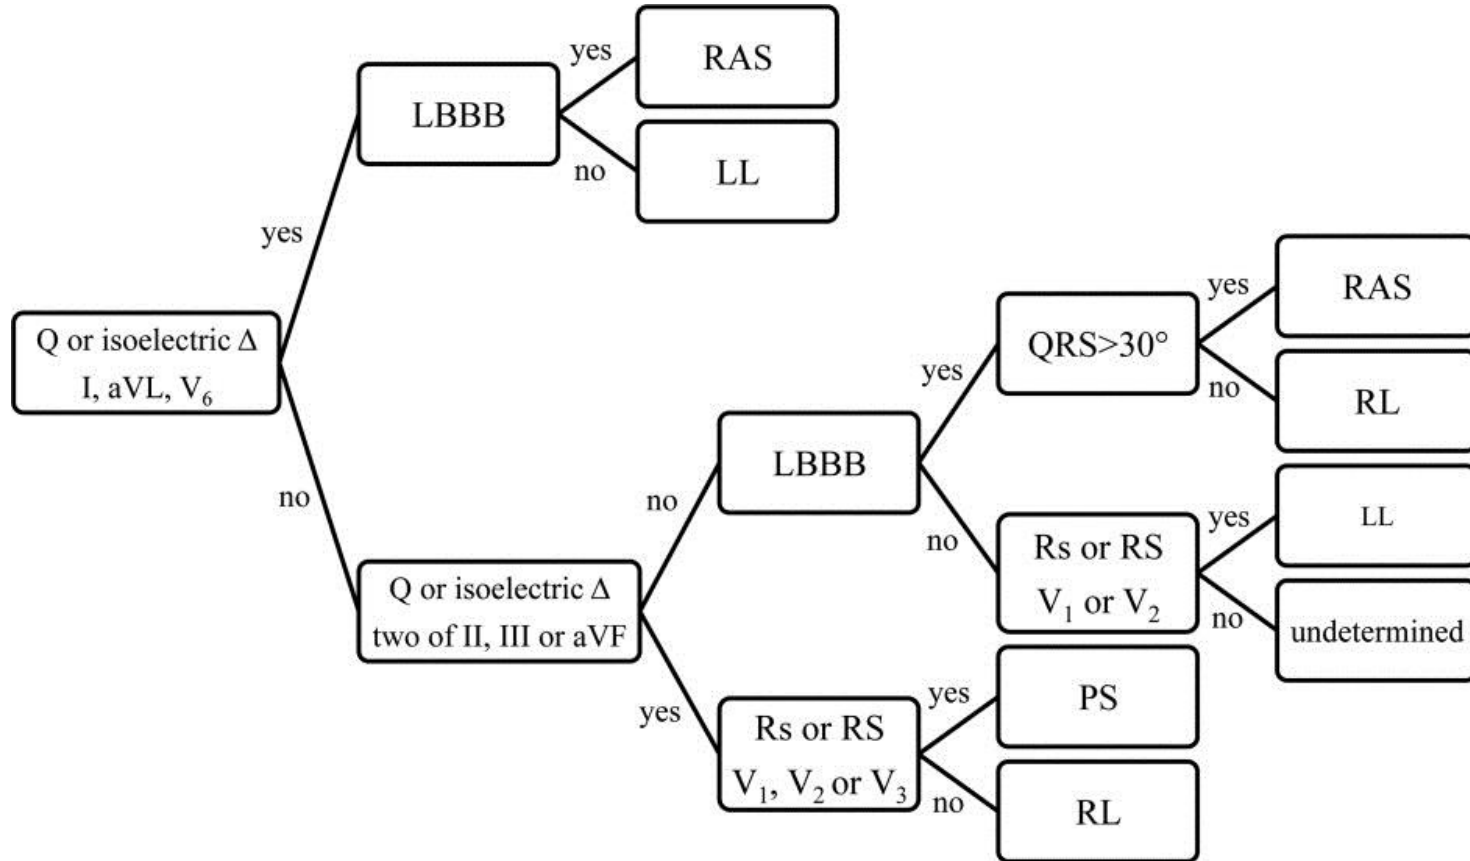

Figure 1. Algorithm summarizing steps to identify the location of an accessory pathway using the 12-lead electrocardiogram. See text for discussion.

David J. Fox, George J. Klein, Allan C. Skanes, Lorne J. Gula, Raymond Yee, Andrew D. Krahn

How to identify the location of an accessory pathway by the 12-lead ECG

Heart Rhythm, Volume 5, Issue 12, 2008, 1763–1766

Reorder No. 100-11332

AVRT mechanisms

Orthodromic

Antidromic

Orthodromic AVRT

Antidromic AVRT

Pre-excited atrial fibrillation

Broad complex tachycardias

VT vs SVT with aberrancy

VT or SVT?

Features that favour VT (1)

AV dissociation

Features that favour VT (2)

Capture beat

Fusion beat

Brugada's sign

Josephson's sign

Features that favour VT (3)

Positive concordance

Negative concordance

Features that favour VT (4)

RBBB-like morphology

LBBB-like morphology

Tall,
smooth R

Bigger L
'rabbit ear'

qR

Favours VT

V1

Bigger R
'rabbit ear'

Favours SVT

V6

QS

R/S < 1

Favours VT

Favours SVT

QS

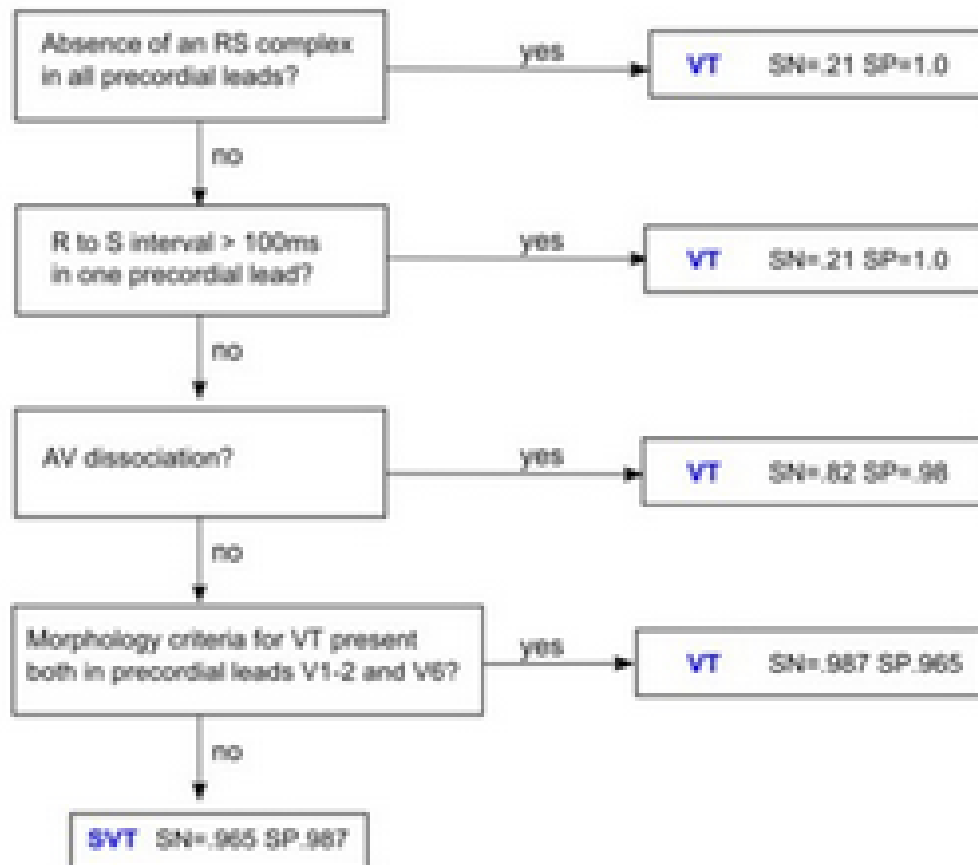

qR

No Q wave

Brugada Algorithm

Polymorphic VT (Torsades de Pointes)

Bradycardia

Sinus bradycardia

Sinus arrest

Tachy-brady syndrome

Mobitz type I 2nd degree AV block (Wenckebach)

2:1 AV block and Wenckebach
(in setting of acute inferior/RV MI)

Mobitz type II 2nd degree AV block

3rd degree AV block

3rd degree AV block (isorhythmic AV dissociation)

Other ECG syndromes

Type 1 Brugada pattern

Brugada syndrome

- Mutation in cardiac sodium channel gene
- >60 known mutations, >50% sporadic
- Type 1 pattern:
- Can be unmasked by:
 - Fever
 - Ischaemia
 - Drugs (esp. Class 1C)
 - Electrolyte disturbance (K⁺)
- ICD if symptomatic

- V1-V3
- >2mm coved ST elevation
- T wave inv.

type 1

type 2

type 3

(Congenital) long QT syndrome

Congenital long QT syndrome

- Many subtypes
- LQT1/LQT2/LQT3 account for >97%
- Various patterns of inheritance
- QTc >440 msec (male), >460 msec (female)
- Risk of TdP greatest when QTc >500 msec
- Beta-blockers ± ICD

LQT1

LQT2

LQT3

II

aVF

V5

Acquired long QT (e.g. drugs,
hypokalaemia)

Arrhythmogenic right ventricular
cardiomyopathy (ARVC)

ARVC

- Inherited myocardial disease
- Mainly autosomal dominant
- Fibro-fatty infiltration of RV myocardium
- Can involve LV
- Diagnosis complex: task force criteria
- ICD if high risk
